Morning Commentary

Overview: US equities are set to open basically flat on the session after a wobbly back-and-forth futures market overnight. Rates are slightly higher in the US despite weakness in Europe after global PMI data on services sectors from Markit showed material weakness thanks to COVID's resurgence across the global economy. US COVID data continues to worsen, and various levels of government are being forced to intervene. The dollar is down sharply, and gold is up a third day. [Global Economic Scorecard](#)

Lockdowns Return: Last night, LA Mayor Eric Garcetti issued a stay-at-home order for residents of the city in a bid to prevent an overrun of the health care system. Data for the City of Los Angeles is not available, but LA County *on its own* is about 3.8% of national GDP. While lockdowns will not be as severe for economic activity as they were in March and April, continued spread around the country may lead to this sort of outcome in enough areas to substantially impact Q4 growth. The Atlanta Fed is currently tracking QoQ SAAR for Q4 at 11.1%; that is *far* too high because it's biased towards very positive data released earlier in the quarter. Q4 growth is still unlikely to be negative, but a double-digit pace is not going to happen either.

Earnings: Good news from retailing this morning as arts-and-craft retailer **Michaels (MIK)** reported blow-out comps of +16.3% YoY versus +14.4% estimated. Prior quarter comps were +12%, so the pandemic boom in craft spending appears to be ongoing. **Dollar General (DG)** also reported this morning, beating EPS by almost 15% and delivering comp sales +12.2% YoY (11.5% estimated). The company also reported Comp sales up "about 14% YoY" for the October 31st-December 1st period. Cloud names are likely face pressure today as analysts have been slashing price targets on **Splunk (SPLK)** in the wake of a brutal miss in EPS, recurring revenue, revenue, and guidance last night. The stock is down almost 22% pre-market, to the lowest levels since May. Finally, we note that materials giant 3M (MMM) reported restructuring that will eliminate 2,900 jobs around the world; not fantastic news given the relatively firm goods markets that the company serves.

APAC Markets: Asia was generally higher last night despite small drops for China and Taiwan. Korea continues to outperform, up 76 bps, though the KOSPI had to overcome 4:3 negative breadth to do it. Local FX was almost universally higher versus the dollar, while metals cooled in the overnight session. Australian trade data last night showed the best October on record for iron ore export volumes. In fixed income, focus on Chinese defaults continues, though the local currency bond market has stabilized over the last week or so following months of higher yields relative to policy rates. USDCNY is at 52 -week (and multi-year) closing lows versus the dollar as-of this writing.

Europe Markets: The STOXX 600 has swung back-and-forth intraday and is now down 18 bps on 3:2 negative breadth featuring leadership from Travel & Leisure versus lagging Energy and Chemicals groups. Travel & Leisure is being held up by surging gaming stocks including **Flutter (ADR PDYPY)**, **GVC (ADR GMVHY)**, and **Evolution Gaming (ADR EVVTY)**. Flutter's 7.5% surge is coming thanks to a deal to buy 37% of daily fantasy platform FanDuel for \$4.2bn, taking its stake to 95%. As part of the deal, **Fox (FOXA)** will invest further in Flutter. The dealmaking has similar names ripping pre-market.

Elsewhere, EURUSD is continuing its surge, ripping through 1.21 with a 30 bps gain amidst broad dollar weakness that is even benefitting GBPUUSD despite news that if any Brexit trade deal arrives it will be a very last minute affair. Rates are lower in Europe and spreads are biased tighter.

Morning Commentary

Markit PMIs: Overnight services PMIs from Markit were mixed. As shown below, China's services number was very strong, nearing the peak of the post-pandemic rebound. New business rose at the fastest rate in almost 10 years. That's welcome news given concerns over rising bad debts and the dependence on foreign demand to recovery from COVID. The rest of the global services economy is going in very much the opposite direction, with major decelerations versus October thanks to resurgent virus cases across the northern hemisphere. The Eurozone saw Services PMI fall to 41.7, with France below 40 thanks to its new restrictions. On a composite basis, which weights manufacturing and services, PMIs are truly all over the map, but have generally decelerated sharply in Q4 thanks to the virus.

European Services Sector In Full Retreat As COVID Surges

The Global Economy Is All Over The Place Based On Markit Composite PMIs

Morning Commentary

Coronavirus: The catch-up of the Thanksgiving weekend continues. While tests have continued to drop on a 7-day moving average basis, new confirmed cases are at a record, driving new post-spring highs for the positive test rate nationally (nearing 11%). Deaths are also continuing to surge as paperwork catches up to Thanksgiving. There are a variety of ways to count the specific number of US deaths but our approach using Covid Tracking Project data puts the number yesterday at 2,711 versus a peak of 2,751 from May 7th. Given the fact that leading indicators of deaths (new cases, positive test rate, hospitalizations) are all at new highs, it's almost certain that this number will continue to rise.

The only really good news we've gotten so far is that deaths relative to cases remain modest. While not a true fatality rate, any comparison of recent confirmed positives to COVID deaths is at series lows for the pandemic. For example, deaths are 0.92% of confirmed positives over the last six weeks, or 0.89% of confirmed positives over the past four. While this number is likely to rise if spread slows (because deaths lag), it's still only ~1/5th of what was being reported in April and May.

Morning Commentary

COVID By State: The table below includes a wide range of COVID-19 data points by state, as a reference. We will update it daily on this page.

COVID-19 Outbreak Statistics By State: Level, Growth, and Per Capita (As-Of 12/2/2020)
